

Couplings & Accessories for Firefighting Equipments

We provide international quick-disconnect fire couplings, nozzles and hydrant fittings for firefighting and fire extinguishing use. They are produced in basically intensified aluminum light-alloy, brass and gunmetal bronze materials.

DIN Storz couplings are available in the range of 25D ~ 150, BS instantaneous couplings 1½" ~ 2½", NF DSP / AR couplings DN40 ~ 100, GFR couplings DN20 ~ 100, UNE Barcelona couplings DN25 ~ 70, JIS Nakajima DN40 ~ 65, Russian Gost DN50 ~ 125. Nozzles include straight jetting ones, fog spray and sheet spray types.

The series, inclusive of hose tail inside and outside thread and blind caps, are made according to international standards or tailored dimensions per specific demands for equipments.

Forging Aluminum

We apply forging technique for firefighting couplings which intensifies the working safety. Comparison test proves the mechanical resistance a forging storz is twice higher than a casted piece.
